Google Analytics Setup and Measurement

Implementation checklist

1. Create a GA4 property and web data stream for the real published domain.
2. Install the official Google tag or configure through Google Tag Manager.
3. Replace any placeholders with the real Measurement ID.
4. Set up consent controls appropriate to the audience and jurisdiction.
5. Verify in GA4 Realtime and DebugView using test traffic.
6. Connect Search Console after site verification.
7. Configure platform conversion events and test with each platform's diagnostics.

Events

Event	Trigger	Parameters	Primary?
`page_view`	Page viewed	page_location, page_title	No
`cta_click`	Main CTA click	placement, campaign	No
`form_start`	Form first interacted with	form_id	No
`generate_lead`	Valid signup confirmed by backend	form_id, lead_magnet	Yes
`email_signup_confirmed`	Confirmation after backend success	method	Optional

Only fire `generate_lead` after a real successful submission. A front-end demo message is not proof that a lead was stored. Never send email addresses or other personally identifiable information to GA4.

UTM conventions

Use lowercase values, underscores, and a consistent taxonomy:

- `utm_source=google`, `utm_medium=cpc`, `utm_campaign=bb_checklist_28d`, `utm_content=rsa_a`
- `utm_source=facebook`, `utm_medium=paid_social`, `utm_campaign=bb_checklist_28d`, `utm_content=creative_a`
- Organic examples: `utm_source=instagram`, `utm_medium=organic_social`, `utm_campaign=bb_education_month`

KPIs and formulas

- CTR = clicks / impressions × 100
- CPC = spend / clicks
- Landing-page conversion rate = leads / landing-page sessions × 100
- CPL = spend / leads
- Email CTR = unique email clicks / delivered emails × 100

- Qualified-lead rate = qualified leads / total leads × 100

QA checklist

- [ ] Test on mobile and desktop
- [ ] Check form validation and backend response
- [ ] Confirm one event per successful lead
- [ ] Verify UTM parameters persist through signup
- [ ] Check GA4 Realtime/DebugView
- [ ] Confirm consent settings and privacy disclosures
- [ ] Check email deliverability and unsubscribe
- [ ] Document data limitations and access controls
